

Take advantage of KSi patent technology at an economical price with the KSi 1212 Inclinor Conveyor.

The KSi Model 1212 Inclinor conveyor mimics the KSi's patented tube conveyor technology within a box conveyor design to provide all the benefits at a lower price point. The 1212 Series I also has a low-profile inlet hopper for convenience in getting under low inlet points.

- 12" crescent belt in hopper transitions to 12" patented cleated belt up incline portion
- Low profile, collapsible inlet hopper (30" wide x 60" long x 10" high)
- Curved belt pan inside box creates tube-like carrying functionality and efficiency
- Complete enclosed return
- Electric or hydraulic drive
- Patented top-drive configuration
- 2,000 bu/hr
- 30-degree incline capabilities
- 376 ft/min for gentle seed handling
- Clean-out door for ease of changing commodities or varieties

Note: Box-style conveyor stress/strength limitations only allow for 30-degree incline capabilities and a maximum conveyor length of 32'
